

The **XL STRAJET** is a nozzle holder suitable for triple pump that can work at around 400 bar and 600 L/min. The difference is in the size of the inner duct (ID 15mm vs ID 11mm). This will save around 50% of the head losses induced by the 11 ID of the STRAJET IV inner duct and provides a greater cutting force of the grout mix on equal pump's pressure and flow rate.

**50% HEAD LOSSES LESS
IN COMPARISON WITH STRAJET IV!**

BIGGER GROUT DUCT DIAMETER !!
